

Developers

Any third party can integrate with Esoko to use its services, or access its content. Before an API can be used :

1. You should be a registered user of Esoko and have setup a Network
2. You will need a valid (paid) subscription for that Network
3. Have relevant content (Prices etc.) in your Network
4. Obtain a Unique API key for your Network
5. Review the API document and testing via Esoko Sandbox
